

MobileCTI™**PC Computer Telephony Integration***PC Computer Telephony Integration.*

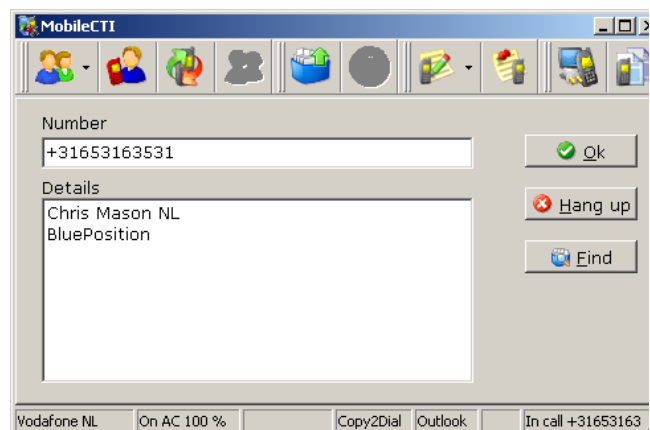

MobileCTI™ is an advanced PC Computer Telephony Integration solution for mobile telephony solutions. MobileCTI™ just needs a mobile phone connected to the PC via Bluetooth™ or cable connection before the user can benefit of Computer Telephony Integration.

MobileCTI™ is carefully designed to give a mobile user a simple everyday call handling tool, with integration to other PC applications, with maximum overview and minimum effort. For instance MobileCTI™ uses Caller Id to match against Outlook/Exchange contacts, and displays this additional information to any in or outbound call. If the Caller Id cannot be matched, an Internet search will be performed against a Internet based Directory Query Services. MobileCTI™ allows advanced call handling on a mobile phone using the PC, for instance, Hold/Retrieve, Consultation Call, and even Transfer Call can be made directly from the keyboard or mouse.

MobileCTI™ includes a complete interface towards Windows™ dialer, allowing calls to be made directly from Contacts in Outlook, or any CRM application supporting Windows™ dialling. For other applications, with no build-in dialing capabilities, MobileCTI™ offers the Unique Copy2Dial™ functionality, simply mark a number and copy it, using either Ctrl-C or the mouse buttons, and MobileCTI™ will suggest call handling, no plug-ins needed.

The MobileCTI™ user can also send SMS directly from the PC, and even include caller details in the SMS, and save additional time, using the skeletons for SMS. In addition MobileCTI™ offers a new degree of security with WSLock™, which automatically locks the PC when the mobile terminal is disconnect from the workstation.

MobileCTI™ is the complete mobile computer telephony interface for integrating a mobile phone with Microsoft Outlook™ and other office applications.
